Water Management

B-hyve Farm by Orbit Irrigation

What is B-hyve Farm?

B-hyve Farm is a new system that allows you to remotely control and monitor your pivot irrigation system from any Android or iOS device.

No Annual Fee

Get the control you want without the annual fee and with new exciting features.

Long Range Wi-Fi

With long range Wi-Fi you can connect your phone, computer, tablet, or any other device to the internet on your farm. A base station connects to the internet at your home, shop, or office. The signal is then broadcast up to 7 miles to your pivots. Want to increase your range even more? No problem! Repeaters are available to extend your signal. Set up a camera to monitor pumps and tanks, connect Wi-Fi ready moisture and temperature sensors, or even stream Netflix on your phone without using any cellular data.

DIY Installation

B-hyve farm is easy to install! The wires on the box match, color for color, the wires on your pivot. For even faster installation, each wire is also labeled with where it should be wired.

Misalignment Detection

Ever wanted to know which tower is out of line before driving out to the pivot? Now you can! When B-hyve farm detects a safety error, it checks to see which tower is out of line and sends you an alert.

Panel Mode

B-hyve farm allows you to control the pivot from the original pivot panel. Unlike others, no rewiring is required and there's no limit on what you can control.

Patent Pending Map Features

When you need to set a stop on your pivot, B-hyve farm will show a map view of your pivot. Simply click on the map where you want the pivot to stop. The same thing works with VRI and End Gun. Create the zones by clicking on areas of the map. Setting up stops, VRI, and End Gun controls has never been easier.

History

B-hyve farm logs each event that happens at your pivot. Know when a pivot stopped, restarted, or who changed a setting.

How about pumps?

We also control remote pumps, so even if your pump isn't next to your pivot, you can control and monitor your pump remotely.
